nuvo™

The future of pregnancy care is here. INVU by Nuvo is a complete telehealth solution for the remote administration of fetal surveillance procedures, including non-stress tests (NSTs)

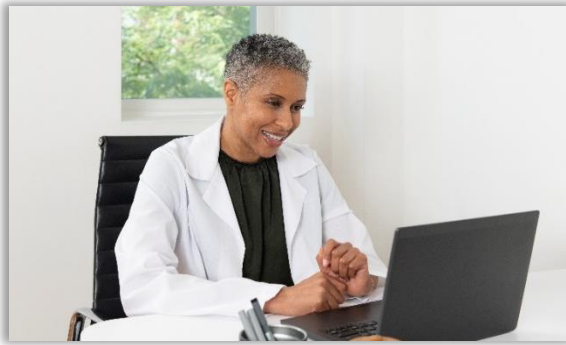

Healthcare providers in the OBGYN space now have a true telehealth solution that aims to reduce the need for in-office visits while improving staff efficiency. INVU by Nuvo is an FDA approved, prescription-initiated remote pregnancy monitoring and management platform that enables a direct connection between expectant parents and their healthcare providers.

NUVO™
Give life
a better beginning™

Remote Monitoring

- Initiate a virtual care model with patients within walking distance or hours away
- Increase all patient's access to care
- Attract and treat more patients while continuing to maintain significant insight into patient care

Staff Efficiency

- Optimize internal operational tasks by reliably conducting routine monitoring sessions while the patient is at home or work
- Conduct multiple remote NSTs at the same time to reduce total monitoring time and reduce staff burnout

Patient Self-Application

- With the INVU™ Sensor Band being a lightweight easy to use product, there is no need for precise sensor placement
- Live sessions using self-applied bands are designed for accurate, reliable, and safe fetal ECG acquisition even with high BMI

Reliable

The INVU™ method of fetal heart rate monitoring demonstrated a highly significant correlation between FHR measurements from INVU™ and cardiotocography

Mhajna et al. (2020). Wireless, remote solution for home fetal and maternal heart rate monitoring (Am J Obstet Gynecol, Vol. 2, Iss. 2)

The INVU™ method of remote uterine activity monitoring has been validated to show a high sensitivity (89%) to the gold standard IUPC and superiority to TOCO --- and INVU was unaffected by BMI

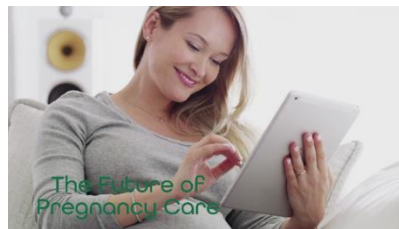

Schwartz et al. (2022). Novel uterine contraction monitoring to enable remote, self-administered nonstress testing (Am J Obstet Gynecol, Vol. 226, Iss. 4)
